

Question ID: 072666a3

Question

The tiny transistors that control the flow of electricity in modern devices may one day be made of wood. Researchers in Switzerland have found a way to use heat and chemicals to widen the grooves in dry pieces of balsa wood. _____ these grooves become wide enough that electrical conductors can be passed through them.

Which choice completes the text with the most logical transition?

Answer

- A. For example,
- B. Previously,
- C. In contrast,
- D. As a result,
