Question

Few animals are known to spit: among them are humans, cobras, and camels. But in January 2022 at a nature preserve in southern England, bird-watcher Clare Jacobs observed a gray seal spitting a jet of water at a white-tailed eagle flying overhead. Seals had never been seen spitting before. Biologist Sean Twiss, who studies gray seals, believes that the seal may have been attempting to scare the eagle away from a food source or that the seal may have just been playing.

Which choice best states the main topic of the text?

Answer

- A. Bird-watching in southern England
- B. A previously unseen behavior of gray seals
- C. How white-tailed eagles defend their territory against other predators
- D. Differences between gray seals and white-tailed eagles
