Question

Researcher Lin Zhi developed a process for increasing the tensile strength—measured in gigapascals, or GPa—of silkworm ____ dissolving and reweaving the silk in a solution of iron metal ions, zinc, and sugar, Zhi increased the amount of force required to stretch it from approximately 0.5 GPa to 2 GPa.

Which choice completes the text so that it conforms to the conventions of Standard English?

Answer

- A. silk, by
- B. silk by
- C. silk and by
- D. silk. By

Correct Answer: D

Rationale

Choice D is the best answer. The independent clauses "researcher Lin Zhi...silk" and "by dissolving...2 GPa" can be grammatically separated by a period. They can stand alone as sentences, and this is the only choice that lets them do that.

Choice A is incorrect. This choice results in a grammar error called a comma splice. "Researcher Lin Zhi...silk" and "by dissolving...2 GPa" are both independent clauses. They need to either be separated with punctuation like a period or a semicolon, or they need to be connected by a comma and a coordinating conjunction like "and." A comma alone isn't enough. Choice B is incorrect. This choice results in a grammar error called a run-on sentence. "Researcher Lin Zhi...silk" and "by dissolving...2 GPa" are both independent clauses. They need to either be separated with punctuation like a period or a semicolon, or they need to be connected by a comma and a coordinating conjunction like "and." Choice C is incorrect. This choice results in a grammar error called a run-on sentence. "Researcher Lin Zhi...silk" and "by dissolving...2 GPa" are both independent clauses. The coordinating conjunction "and" isn't enough to link them by itself. We need a comma, too.
