

Question ID: 772835db

Question

Most of the ice found on Earth is ice Ih, distinguished by a crystalline structure in which molecules form a hexagonal pattern. Amorphous ice, on the other hand, constitutes most of the ice in the ultrafrigid environment of outer space. Defined by a disorganized molecular structure, _____

Which choice completes the text so that it conforms to the conventions of Standard English?

Answer

- A. ice Ih contains crystals, whereas amorphous ice, which lacks the thermal energy to form them, does not.
- B. amorphous ice lacks the thermal energy to form the crystals found in ice Ih.
- C. the lack of thermal energy in amorphous ice explains its inability to form the crystals found in ice Ih.
- D. ice Ih differs from amorphous ice in that it possesses the thermal energy to form crystals.
