Question

The graph shown models the number of residents of a certain city x years after **2010**. How many residents does this model estimate the city had in **2010**?

- Answer**
- A. 0
 - B. 2,000
 - C. 20,000
 - D. 25,000

Correct Answer: C

Rationale

Choice C is correct. It's given that x represents years after **2010**. Therefore, **2010** is represented by $x = 0$. On the model shown, the point with an x -coordinate of **0** has a y -coordinate of **20,000**. Thus, the model estimates that in **2010**, the city had **20,000** residents.

Choice A is incorrect. This is the value of x that represents the year **2010**.

Choice B is incorrect and may result from conceptual or calculation errors.

Choice D is incorrect. This is approximately the number of residents the model estimates the city had in **2014**, not **2010**.
