Question

The graph shows the predicted value y , in dollars, of a certain sport utility vehicle x years after it is first purchased.

Which of the following is closest to the predicted value of the sport utility vehicle **3** years after it is first purchased?

- Answer**
- A. \$9,619
 - B. \$13,632
 - C. \$19,320
 - D. \$23,000

Correct Answer: B

Rationale

Choice B is correct. For the graph shown, the horizontal axis represents the number of years after a certain sport utility vehicle is first purchased, and the vertical axis represents the predicted value, in dollars, of the sport utility vehicle. According to the graph, **3** years after the sport utility vehicle is purchased, the predicted value of the sport utility vehicle is between **\$10,000** and **\$15,000**. Of the given choices, only **\$13,632** is between **\$10,000** and **\$15,000**. Therefore, **\$13,632** is closest to the predicted value of the sport utility vehicle **3** years after it is first purchased.

Choice A is incorrect. This is closest to the predicted value of the sport utility vehicle **5** years after it is first purchased.

Choice C is incorrect. This is closest to the predicted value of the sport utility vehicle **1** year after it is first purchased.

Choice D is incorrect. This is closest to the predicted value of the sport utility vehicle when it is first purchased.
