

## Question ID: 4618501a

### Question

$$f(x) = 3,000(0.75)^x$$

A conservation scientist implemented a program to reduce the population of a certain species in an area. The given function estimates this species' population  $x$  years after **2008**, where  $x \leq 8$ . Which of the following is the best interpretation of **3,000** in this context?

### Answer

- A. The estimated percent decrease in the population for this species and area every **8** years after **2008**
- B. The estimated percent decrease in the population for this species and area each year after **2008**
- C. The estimated population for this species and area **8** years after **2008**
- D. The estimated initial population for this species and area in **2008**
