Question

A function p estimates that there were **2,000** animals in a population in **1998**. Each year from **1998** to **2010**, the function estimates that the number of animals in this population increased by **3%** of the number of animals in the population the previous year. Which equation defines this function, where $p(x)$ is the estimated number of animals in the population x years after **1998**?

Answer

A. $p(x) = 2,000(3)^x$

B. $p(x) = 2,000(1.97)^x$

C. $p(x) = 2,000(1.03)^x$

D. $p(x) = 2,000(0.97)^x$
