

Question ID: 7d3a84bf

Question

The graph shows the estimated boiling point y , in degrees Celsius, of a normal paraffin with a molecular weight of x grams per mole, where $1 \leq x \leq 280$. Which statement is the best interpretation of the point $(149.02, 186.05)$?

Answer

- A. A normal paraffin with a molecular weight of **186.05** grams per mole has an estimated boiling point of **149.02** degrees Celsius.
- B. A normal paraffin with a molecular weight of **149.02** grams per mole has an estimated boiling point of **186.05** degrees Celsius.
- C. The minimum estimated boiling point for normal paraffins corresponds to a paraffin with a molecular weight of **149.02** grams per mole and an estimated boiling point of **186.05** degrees Celsius.
- D. The maximum estimated boiling point for normal paraffins corresponds to a paraffin with a molecular weight of **149.02** grams per mole and an estimated boiling point of **186.05** degrees Celsius.
