Question

The graph models the number of active projects a company was working on x months after the end of November **2012**, where $0 \leq x \leq 6$. According to the model, what is the predicted number of active projects the company was working on at the end of November **2012**?

Answer

- A. 0
- B. 5
- C. 8
- D. 9

Correct Answer: B

Rationale

Choice B is correct. It's given that the graph models the number of active projects a company was working on x months after the end of November **2012**. Therefore, the value of x that corresponds to the end of November **2012** is **0**. The point at which $x = 0$ is the y-intercept of the graph. It follows that the y-intercept of the graph shown is the point $(0, 5)$. Therefore, according to the model, the predicted number of active projects the company was working on at the end of November **2012** is **5**.

Choice A is incorrect. This is the value of x that corresponds to the end of November **2012**, not the predicted number of active projects the company was working on at the end of November **2012**.

Choice C is incorrect. This is the predicted number of active projects the company was working on **2** months after the end of November **2012**.

Choice D is incorrect. This is the predicted number of active projects the company was working on **4** months after the end of November **2012**.
