

Question

The graph of $y = g(x)$ is shown. If $g(x + 28) = \frac{1}{10}(x - a)^2(x - b)^2(x - c)$, where a , b , and c are constants, which of the following could be the value of b ?

Answer

- A. 31
- B. 3
- C. -2
- D. -25
