Question
If $2(x - 5) + 3(x - 5) = 10$, what is the value of $x - 5$?

- Answer**
- A. 2
 - B. 5
 - C. 7
 - D. 12

Correct Answer: A

Rationale
Choice A is correct. Adding the like terms on the left-hand side of the given equation yields $5(x - 5) = 10$. Dividing both sides of this equation by 5 yields $x - 5 = 2$.
Choice B is incorrect and may result from subtracting 5, not dividing by 5, on both sides of the equation $5(x - 5) = 10$. Choice C is incorrect. This is the value of x, not the value of $x - 5$. Choice D is incorrect. This is the value of $x + 5$, not the value of $x - 5$.
