Question

If $2(3t - 10) + t = 40 + 4t$, what is the value of $3t$?

Correct Answer: 60

Rationale

The correct answer is **60**. Subtracting t from both sides of the given equation yields $2(3t - 10) = 40 + 3t$. Applying the distributive property to the left-hand side of this equation yields $6t - 20 = 40 + 3t$. Adding **20** to both sides of this equation yields $6t = 60 + 3t$. Subtracting $3t$ from both sides of this equation yields $3t = 60$. Therefore, the value of $3t$ is **60**.
