Question

If $5 - 7(2 - 4x) = 16 - 8(2 - 4x)$, what is the value of $2 - 4x$?

Correct Answer: 11

Rationale

The correct answer is **11**. Subtracting **5** from each side of the given equation yields $-7(2 - 4x) = 11 - 8(2 - 4x)$. Adding $8(2 - 4x)$ to each side of this equation yields $2 - 4x = 11$. Therefore, the value of $2 - 4x$ is **11**.
