Question

A line in the xy -plane has a slope of **9** and passes through the point $(0, -5)$. The equation $y = px + r$ defines the line, where p and r are constants. What is the value of p ?

Correct Answer: 9

Rationale

The correct answer is **9**. It's given that the equation $y = px + r$ defines the line. In this equation, p represents the slope of the line and r represents the y -coordinate of the y -intercept of the line. It's given that the line has a slope of **9**. Therefore, the value of p is **9**.
