Question

The function  $g$  is defined by  $g(x) = 10x + 8$ . What is the value of  $g(x)$  when  $x = 8$ ?

Answer

- A. 0
- B. 8
- C. 10
- D. 88

Correct Answer: D

Rationale

Choice D is correct. The value of  $g(x)$  when  $x = 8$  can be found by substituting 8 for  $x$  in the given equation  $g(x) = 10x + 8$ . This yields  $g(8) = 10(8) + 8$ , or  $g(8) = 88$ . Therefore, when  $x = 8$ , the value of  $g(x)$  is 88.

Choice A is incorrect. This is the value of  $x$  when  $g(x) = 8$ , rather than the value of  $g(x)$  when  $x = 8$ .

Choice B is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect and may result from conceptual or calculation errors.
