Question

A linear function f gives a company's profit, in dollars, for selling x items. The company's profit is \$220 when it sells 8 items, and its profit is \$320 when it sells 10 items. Which equation defines f ?

Answer

A. $f(x) = 150x - 320$

B. $f(x) = 32x$

C. $f(x) = 50x - 10x$

D. $f(x) = 50x - 180$
