Question

Brian saves $\frac{2}{5}$ of the **\$215** he earns each week from his job. If Brian continues to save at this rate, how much money, in dollars, will Brian save in **9** weeks?

Correct Answer: 774

Rationale

The correct answer is **774**. It's given that Brian saves $\frac{2}{5}$ of the **\$215** he earns each week from his job. Therefore, Brian saves $(\frac{2}{5})(\$215)$, or **\$86**, per week. If Brian continues to save at this rate of **\$86** per week for **9** weeks, then he will save a total of **(9)(86)**, or **774**, dollars.
