

Question ID: 86f7483f

Question

During spring migration, a dragonfly traveled a minimum of **1,510** miles and a maximum of **4,130** miles between stopover locations. Which inequality represents this situation, where d is a possible distance, in miles, this dragonfly traveled between stopover locations during spring migration?

Answer

A. $d \leq 1,510$

B. $1,510 \leq d \leq 4,130$

C. $d \geq 4,130$

D. $4,130 \leq d \leq 5,640$
