**Question**  
A number  $x$  is at most **17** less than **5** times the value of  $y$ . If the value of  $y$  is **3**, what is the greatest possible value of  $x$ ?

**Correct Answer:** -2

**Rationale**  
The correct answer is **−2**. It's given that a number  $x$  is at most **17** less than **5** times the value of  $y$ , or  $x \leq 5y - 17$ . Substituting **3** for  $y$  in this inequality yields  $x \leq 5(3) - 17$ , or  $x \leq -2$ . Thus, if the value of  $y$  is **3**, the greatest possible value of  $x$  is **−2**.
