

Question ID: dd875c97

Question

A truck can haul a maximum weight of **5,630** pounds. During one trip, the truck will be used to haul a **190**-pound piece of equipment as well as several crates. Some of these crates weigh **25** pounds each and the others weigh **62** pounds each. Which inequality represents the possible combinations of the number of **25**-pound crates, ***x***, and the number of **62**-pound crates, ***y***, the truck can haul during one trip if only the piece of equipment and the crates are being hauled?

Answer

A. $25x + 62y \leq 5,440$

B. $25x + 62y \geq 5,440$

C. $62x + 25y \leq 5,630$

D. $62x + 25y \geq 5,630$
