Question

$$\begin{aligned}4x &= 20 \\ -3x + y &= -7\end{aligned}$$

The solution to the given system of equations is (x, y) . What is the value of $x + y$?

Answer

- A. -27
- B. -13
- C. 13
- D. 27

Correct Answer: C

Rationale

Choice C is correct. It's given that $4x = 20$ and $-3x + y = -7$ is a system of equations with a solution (x, y) . Adding the second equation in the given system to the first equation yields $4x + (-3x + y) = 20 + (-7)$, which is equivalent to $x + y = 13$. Thus, the value of $x + y$ is 13 .

Choice A is incorrect. This represents the value of $-2(x + y) - 1$.

Choice B is incorrect. This represents the value of $-(x + y)$.

Choice D is incorrect. This represents the value of $2(x + y) + 1$.
