Question

$x = 8$

$x + 3y = 26$

The solution to the given system of equations is (x, y) . What is the value of y ?

Correct Answer: 6

Rationale

The correct answer is **6**. The first equation in the given system is $x = 8$. Substituting **8** for x in the second equation in the given system yields $8 + 3y = 26$. Subtracting **8** from both sides of this equation yields $3y = 18$. Dividing both sides of this equation by **3** yields $y = 6$. Therefore, the value of y is **6**.
