Question

$y = -2x$

$3x + y = 40$

The solution to the given system of equations is (x, y) . What is the value of x ?

Correct Answer: 40

Rationale

The correct answer is **40**. It's given in the first equation of the system that $y = -2x$. Substituting $-2x$ for y in the second equation of the system yields $3x + (-2x) = 40$. Combining like terms on the left-hand side of this equation yields $x = 40$. Therefore, the value of x is **40**.
