

Question ID: 6e50ce28

Question

The sum of a number x and 7 is twice as large as a number y . The number y is 3 less than the number x . Which system of equations describes this situation?

Answer

A. $x + 7 = 2y$

$$y = x - 3$$

B. $x + 7 = 2y$

$$y = 3 - x$$

C. $2(x + 7) = y$

$$y = x - 3$$

D. $2(x + 7) = y$

$$y = 3 - x$$
