Question

In August, a car dealer completed **15** more than **3** times the number of sales the car dealer completed in September. In August and September, the car dealer completed **363** sales. How many sales did the car dealer complete in September?

Correct Answer: 87

Rationale

The correct answer is **87**. It's given that in August, the car dealer completed **15** more than **3** times the number of sales the car dealer completed in September. Let **x** represent the number of sales the car dealer completed in September. It follows that **$3x + 15$** represents the number of sales the car dealer completed in August. It's also given that in August and September, the car dealer completed **363** sales. It follows that **$x + (3x + 15) = 363$** , or **$4x + 15 = 363$** . Subtracting **15** from each side of this equation yields **$4x = 348$** . Dividing each side of this equation by **4** yields **$x = 87$** . Therefore, the car dealer completed **87** sales in September.
