Question

What is the area, in square centimeters, of a rectangle with a length of **36** centimeters and a width of **34** centimeters?

Answer

- A. **70**
- B. **140**
- C. **1,156**
- D. **1,224**

Correct Answer: D

Rationale

Choice D is correct. The area **A** , in square centimeters, of a rectangle can be found using the formula **$A = \ell w$** , where **ℓ** is the length, in centimeters, of the rectangle and **w** is its width, in centimeters. It's given that the rectangle has a length of **36** centimeters and a width of **34** centimeters. Substituting **36** for **ℓ** and **34** for **w** in the formula **$A = \ell w$** yields **$A = 36(34)$** , or **$A = 1,224$** . Therefore, the area, in square centimeters, of this rectangle is **1,224**.

Choice A is incorrect and may result from conceptual or calculation errors.

Choice B is incorrect. This is the perimeter, in centimeters, not the area, in square centimeters, of the rectangle.

Choice C is incorrect and may result from conceptual or calculation errors.
