Question

What is the area of a rectangle with a length of **4 centimeters (cm)** and a width of **2 cm**?

Answer

- A. **6 cm²**
- B. **8 cm²**
- C. **12 cm²**
- D. **36 cm²**

Correct Answer: B

Rationale

Choice B is correct. The area of a rectangle with length *ℓ* and width *w* can be found using the formula $A = \ell w$. It’s given that the rectangle has a length of **4 cm** and a width of **2 cm**. Therefore, the area of this rectangle is **(4 cm)(2 cm)**, or **8 cm²**.

Choice A is incorrect. This is the sum, **in cm**, of the length and width of the rectangle, not the area, **in cm²**.

Choice C is incorrect. This is the perimeter, **in cm**, of the rectangle, not the area, **in cm²**.

Choice D is incorrect. This is the sum of the length and width of the rectangle squared, not the area.
