Question

The area of a square is **64** square inches. What is the side length, in inches, of this square?

Answer

- A. **8**
- B. **16**
- C. **64**
- D. **128**

Correct Answer: A

Rationale

Choice A is correct. It's given that the area of a square is **64** square inches. The area **A**, in square inches, of a square is given by the formula **A** = **s**², where **s** is the side length, in inches, of the square. Substituting **64** for **A** in this formula yields **64** = **s**². Taking the positive square root of both sides of this equation yields **8** = **s**. Thus, the side length, in inches, of this square is **8**.

Choice B is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect. This is the area, in square inches, of the square, not the side length, in inches, of the square.

Choice D is incorrect and may result from conceptual or calculation errors.
