Question

A rectangle has an area of **63** square meters and a length of **9** meters. What is the width, in meters, of the rectangle?

Answer

- A. **7**
- B. **54**
- C. **81**
- D. **567**

Correct Answer: A

Rationale

Choice A is correct. The area ***A***, in square meters, of a rectangle is the product of its length ***ℓ***, in meters, and its width ***w***, in meters; thus, ***A*** = ***ℓw***. It's given that a rectangle has an area of **63** square meters and a length of **9** meters. Substituting **63** for ***A*** and **9** for ***ℓ*** in the equation ***A*** = ***ℓw*** yields **63 = 9*w***. Dividing both sides of this equation by **9** yields **7 = *w***. Therefore, the width, in meters, of the rectangle is **7**.

Choice B is incorrect. This is the difference between the area, in square meters, and the length, in meters, of the rectangle, not the width, in meters, of the rectangle.

Choice C is incorrect. This is the square of the length, in meters, not the width, in meters, of the rectangle.

Choice D is incorrect. This is the product of the area, in square meters, and the length, in meters, of the rectangle, not the width, in meters, of the rectangle.
