SAT	Math	Geometry and Trigonometry	Circles	Medium

Question

Points M , N , and P lie on the circle shown. On this circle, minor arc MN has a length of **39** centimeters and major arc MPN has a length of **195** centimeters. What is the circumference, in centimeters, of the circle shown?

Answer

- A. **39**
- B. **156**
- C. **195**
- D. **234**

Correct Answer: D

Rationale

Choice D is correct. Since the endpoints of minor arc MN and major arc MPN are the same, and the arcs together form a full circle, the sum of the lengths of these two arcs is equal to the circumference of the circle. It's given that the length of minor arc MN is **39** centimeters and the length of major arc MPN is **195** centimeters. Therefore, the circumference of the circle, in centimeters, is **$39 + 195$** , or **234**.

Choice A is incorrect. This is the length, in centimeters, of minor arc MN , not the circumference, in centimeters, of the circle.

Choice B is incorrect. This is the difference of the lengths of major arc MPN and minor arc MN , in centimeters.

Choice C is incorrect. This is the length, in centimeters, of major arc MPN , not the circumference, in centimeters, of the circle.
