Question

Note: Figure not drawn to scale.

In the triangle shown, what is the value of x ?

Correct Answer: 45

Rationale

The correct answer is **45**. An isosceles right triangle has a right angle and two legs of equal length. In the triangle shown, one angle is a right angle and the two legs each have a length of **15**. Thus, the given triangle is an isosceles right triangle. In an isosceles right triangle, the measures of the two non-right angles are **45°**. It follows that the value of x is **45**.
