Question

The bar graph shows the distribution of the number of students in each of four extracurricular activities at a high school.

How many more students are in drama than in chess?

Answer

- A. 10
- B. 30
- C. 40
- D. 70

Correct Answer: A

Rationale

Choice A is correct. It's given that the bar graph shows the distribution of the number of students in each of four extracurricular activities at a high school. The bar representing drama has a height of **40**; therefore, there are **40** students in drama. The bar representing chess has a height of **30**; therefore, there are **30** students in chess. Thus, there are **40 — 30**, or **10** more students in drama than in chess.

Choice B is incorrect. This is the number of students in chess.

Choice C is incorrect. This is the number of students in drama.

Choice D is incorrect. This is the sum of the number of students in drama and in chess.
