Question

A group of students voted on five after-school activities. The bar graph shows the number of students who voted for each of the five activities. How many students chose activity **3**?

Answer

- A. **25**
- B. **39**
- C. **48**
- D. **50**

Correct Answer: B

Rationale

Choice B is correct. The height of each bar in the bar graph given represents the number of students that voted for the activity specified at the bottom of the bar. The bar for activity **3** has a height that is between **35** and **40**. In other words, the number of students that chose activity **3** is between **35** students and **40** students. Of the given choices, **39** is the only value between **35** and **40**. Therefore, **39** students chose activity **3**.

Choice A is incorrect and may result from conceptual errors.

Choice C is incorrect. This is the number of students that chose activity **5**, not activity **3**.

Choice D is incorrect and may result from conceptual errors.
