Question

The list gives the mass, in grams, of **5** alpine marmots.

4,010; 4,010; 3,030; 4,050; 3,050

What is the mean mass, in grams, of these **5** alpine marmots?

Correct Answer: 3630

Rationale

The correct answer is **3,630**. The mean of a data set is the sum of the values in the data set divided by the number of values in the data set. The sum of the masses, in grams, of these alpine marmots is **4,010 + 4,010 + 3,030 + 4,050 + 3,050**, or **18,150** grams. The number of alpine marmots in the data set is **5**. Therefore, the mean mass, in grams, of these **5** alpine marmots is $\frac{18,150}{5}$, or **3,630**.
