

Question ID: c78bb2b8

Question

A scientist measured the lengths of **240** gray seals from Muskeget Island and **120** gray seals from Sable Island. The scientist determined that the mean length of the **240** gray seals from Muskeget Island was **88** inches and the mean length of the **120** gray seals from Sable Island was **94** inches. What was the mean length of all **360** gray seals the scientist measured for this study?

Answer

- A. **89**
- B. **90**
- C. **91**
- D. **92**
