Question

Last year, **200** students enrolled in an interior design program. This year, the number of students enrolled is **147%** of last year’s number. How many students are enrolled in the interior design program this year?

Answer

- A. **247**
- B. **294**
- C. **347**
- D. **394**

Correct Answer: B

Rationale

Choice B is correct. It's given that the number of students enrolled in an interior design program this year is **147%** of last year's number, which is **200**. **147%** of **200** can be expressed as  $(\frac{147}{100})(200)$ , or  $(1.47)(200)$ , which is equivalent to **294**. Therefore, **294** students are enrolled in the interior design program this year.

Choice A is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect and may result from conceptual or calculation errors.

Choice D is incorrect and may result from conceptual or calculation errors.
