Question

During a sale, the original prices of all the items in a clothing store have been reduced by 20%. What is the sale price of a jacket with an original price of \$50 ?

Answer

- A. \$12
- B. \$30
- C. \$36
- D. \$40

Correct Answer: D

Rationale

Choice D is correct. It’s given that the original price of the jacket has been reduced by 20%. Multiplying the original price, \$50, by 20% gives the amount, in dollars, that the price of the jacket is reduced by: $50 \times .20 = 10$. Subtracting this value from the original price results in the sale price of the jacket: $\$50 - \10 , or \$40.

Choices A, B, and C are incorrect and may result from a conceptual or calculation error.
