Question

The table summarizes the distribution of age and assigned group for 90 participants in a study.

|         | 0–9<br>years | 10–19<br>years | 20+<br>years | Total |
|---------|--------------|----------------|--------------|-------|
| Group A | 5            | 17             | 8            | 30    |
| Group B | 6            | 8              | 16           | 30    |
| Group C | 19           | 5              | 6            | 30    |
| Total   | 30           | 30             | 30           | 90    |

One of these participants will be selected at random. What is the probability of selecting a participant from group A, given that the participant is at least 10 years of age?

Answer

- A.  $\frac{5}{18}$
- B.  $\frac{5}{12}$
- C.  $\frac{17}{30}$
- D.  $\frac{5}{6}$
