Question

A product costs **11.00** dollars per pound. What is the cost, in dollars, for **6** pounds of the product?

Correct Answer: 66

Rationale

The correct answer is **66**. It’s given that a product costs **11.00** dollars per pound. Therefore, the cost for **6** pounds of the product is $\left(\frac{11.00 \text{ dollars}}{1 \text{ pound}}\right)(6 \text{ pounds})$, which is equivalent to **66.00**, or **66**, dollars.
