Question

The population density of Cedar County is **230** people per square mile. The county has a population of **85,100** people. What is the area, in square miles, of Cedar County?

Correct Answer: 370

Rationale

The correct answer is **370**. It's given that the population density of Cedar County is **230** people per square mile and the county has a population of **85,100** people. Based on the population density, it follows that the area of Cedar County is **(85,100 people)** $\left(\frac{1 \text{ square mile}}{230 \text{ people}}\right)$, or **370** square miles.
