

Question ID: 47904792

Question

Animals use many objects as tools to achieve goals more easily. Such goals include grooming, finding food, and protecting themselves. For a long time, people thought tool use was unique to primates. Dolphins and other animals, though, have busted the myth that tool use requires hands. Inventively, dolphins use sponges to protect their noses from scratches when foraging on the seafloor. Palm cockatoos also get creative. They use leaves to pad their beaks when opening nuts.

Which choice best states the main purpose of the text?

Answer

- A. To question the belief that birds are intelligent
- B. To compare tool use in humans with tool use in palm cockatoos
- C. To establish that tool use doesn't indicate intelligence
- D. To argue that a variety of animals use tools
